PROFESSIONAL SUMMARY

First-year Computer Science student at PES University with foundational knowledge in database management and application development. Recently developed practical skills in Python and SQL. Passionate about building practical applications with a focus on geolocation services and API integration. Seeking internship opportunities in software development.

SKILLS

Technical: Python, Git/GitHub, Flask, PostgreSQL, Geospatial services, API integration, Computer networks, AWS Cloud Practitioner

Soft Skills: Leadership, Problem-solving, Communication, Collaboration

EDUCATION

PES University, Bengaluru

Bachelor of Technology in Computer Science | Expected Graduation: 2029

PROJECTS

Equizent - Fair Location & Hangout Recommendation System

- Built a web application to recommend fair meeting locations for multiple users based on travel time equity.
- Designed a custom scoring logic combining maximum travel time, average time, and time spread to rank locations.
- Integrated geocoding, POI search, and traffic-aware routing using LatLong, OpenStreetMap, and TomTom APIs.
- Developed an interactive map-based interface with place filtering, scheduling, and real-time traffic support.

Bank Management System

- Developed a console-based banking system with core account and transaction management features.
- Designed and implemented a structured SQL database schema for secure customer and transaction data storage.
- Implemented essential operations including deposits, withdrawals, fund transfers, and balance inquiries.

Image Processing Project - GUI-Based Image Editor

- Built a GUI, PIL, NumPy processing application enabling interactive image transformations.
- Implemented image effects including grayscale, sketch, cartoonify, filters, cropping, and undo/redo functionality.
- Developed using modular code structure and collaborative version control as a team-based academic project.
